Verification matrix

Source: 04_architecture/verification_matrix.md; last changed 2026-10-14.

Two parts: the **current** results (final pre-submission run, 2026-10-14) and, below them, the dated **history** of the Phase 1 clean-state run, kept as a record. Counts in the history are Phase 1 counts and are superseded by this section.

Current results (final pre-submission run, 2026-10-14)

Run on the committed tree, in this order, one suite at a time.

Command	Exit	Result
`python -m unittest discover -s tests`	0	**129 run, OK**
`python 03_evals/run_golden_evals.py`	0	**22/22**
`python 03_evals/mutation_test.py`	0	**13/13 mutants caught**, 0 survived
`python 03_evals/robustness/fault_injection.py`	0	**32/32 faults behaved as required**; source workbook hash unchanged
`git ls-files -z | xargs -0 python scripts/scan_secrets.py`	0	175 text files scanned, 0 findings
`python scripts/check_links.py`	0	0 broken links (count in the final run record)

Not re-run in this pass: the grader on the three commentary texts, the pipeline for abc/xyz, the loader dry run and the live QuickBooks checks. Their last results are in the history below and in `03_evals/FINAL_RUN.md`.

Brief → proof → status (current)

#	Brief line	Proof (command / file)	Today	Status
1.1	Connect securely and reliably	`01_connection/connection_decision.md`; `capture_dated.py` check (c)	71 read-only tools; write tools not registered (`register-tool.ts`)	Done
1.2	Demonstrate it working against the sandbox	`qbo_test_connection.py abc --test`; `evidence/quickbooks/2026-10-14/`	CompanyInfo, P&L and BS all PASS, 04:34–04:36 UTC	Done
1.3	Document chosen / rejected / why	`connection_decision.md`	Doc review only	Done
1.4	Team hosting	`connection_decision.md` "Team hosting"	Design, labelled Proposed	Partial
1.5	Credential handling	`.claude/hooks/guard_secrets.py`, `scan_secrets.py`, `tests/test_evidence_redaction.py`	Scans clean; redaction residual check PASS	Done
2.1	Revenue, margins, opex by category	`src/abc_workbook_adapter.py`; G01–G03, G09–G13 (22 cases in total)	22/22	Done

#	Brief line	Proof (command / file)	Today	Status
2.2	MoM and TTM	`src/financial_analysis.py` ; golden TTM cases	22/22	Done
2.3	Commentary flagging movements	`grade_commentary.py` on engine, reviewed and skill text	3 PASS; flawed control FAIL	Done
2.4	For a human reviewer to finish	`src/monthly_review.py build …` → `monthly_review_2026-06.xlsx`	Rebuilt, APPROVED; same cell values as `02_skill/sample_outputs/`	Done
2.5	Maintainable, extensible	`02_skill/README.md`, `tests/`	129 tests OK	Done
2.6	Another company without a rewrite	`run_client.py xyz`, `run_pipeline.py xyz 2026-05`, `tests/test_client_isolation.py`	Both exit 0	Partial (wide-sheet layout only)
2.S	Stretch: load workbook into sandbox, run end to end	`load_workbook_to_sandbox.py --dry-run`; `--compare` vs today's live P&L	Dry run OK. Live P&L has **no** `Workbook Load` accounts (income 0.00 Jan–Apr 2026); `--compare` exits 1	Not done
3.1	≥5 golden cases	`run_golden_evals.py`	22/22	Done
3.2	Grading approach	`03_evals/GRADING.md`, `grade_commentary.py`	Grader separates good and flawed text	Done
3.3	Regression detection	`mutation_test.py`	13/13 caught	Done
3.4	Commentary quality beyond numbers	`GRADING.md`	Tone and causes not code-graded	Partial
4.1	Structure, files, skills, memory	`04_architecture/architecture.md`	Doc review only	Done
4.2	Hosting	`architecture.md` "Hosting"	Doc review only	Done
4.3	Ten clients, data separation	`tests/test_client_isolation.py`	In unit run, OK	Partial (two clients; OS/credential separation Proposed)
D1	Working connection	`01_connection/`	Checks a–d PASS; MCP server is an untracked clone	Partial
D2	Skill files	`.claude/skills/`, `.claude/commands/monthly-analysis.md`	Saved skill output graded PASS; the skill was **not** re-run live today	Done
D3	Eval cases and grading	`03_evals/`	As above	Done
D4	One-page architecture note	`architecture.md`	Doc review only	Done
R1	Demo connection and analysis	`qbo_test_connection.py --test`, `run_pipeline.py`	Both pass today	Done

#	Brief line	Proof (command / file)	Today	Status
R2	One small modification	`evals_caught.md` "Rehearsed modification", commit `315a473`	Mutation run now covers G18	Done
R3	Why structured this way	`architecture.md`, `workflow.md`	Doc review only	Done
R4	What the evals caught	`03_evals/evals_caught.md`	Today's fixes listed above	Done
R5	What breaks first at ten clients	`architecture.md` "What breaks first"	Doc review only	Done
G1	Sandbox and supplied workbook only	`CLAUDE.md`, `clients/xyz/` (synthetic)	Workbook hash unchanged	Done
G2	Explain every choice as your own	Docs	Depends on the presenter	Partial

History: Phase 1 clean-state run (2026-10-14)

> **These are Phase 1 counts** (103 unit tests, 18/18 golden). Later phases added G19–G22, the 32-fault robustness suite and workflow-failure tests; see the current results above.

Every line of the brief, mapped to the command or file that proves it and the result of the Phase 1 run on 2026-10-14, from a clean `outputs/`. The old `outputs/` was moved aside first and everything was regenerated. Authored inputs that no script produces were then restored: reviewed and skill commentary, reviewer verdicts, the reference commentary, the 3-month reconciliation and earlier run manifests. Audit logs were restored with their history first and today's entries after. Status wording is the same as `brief_traceability.md`.

Runs (Phase 1)

Command	Exit	Key result
`python src/run_client.py abc` / `xyz`	0 / 0	abc: 18 months, 0 warnings. xyz: 14 months, 1 warning (no Sales & Marketing accounts; reported as not available)
`python scripts/run_pipeline.py abc 2026-06` / `xyz 2026-05`	0 / 0	`success`; intake, calculate and grade stages done
`python 03_evals/run_golden_evals.py`	0	18/18
`python 03_evals/mutation_test.py`	0	13/13 mutants caught, 0 survived. First run since the G18 margin-drop change; G18 and `test_gross_margin_drop_flags` now also catch the margin-denominator mutant
`python 03_evals/grade_commentary.py` (engine)	0	PASS
`… --commentary outputs/abc/commentary_2026-06.md` (reviewed)	0	PASS: 27/27 numbers, 3/3 movements, cash risk covered

Command	Exit	Key result
`… --commentary outputs/skill_commentary.md` (saved skill output)	0	PASS: 36/36, 3/3, cash risk covered
`… --commentary outputs/abc/commentary_2026-06_flawed_control.md` (negative control)	1	FAIL as intended: 11/12, 2/3, cash risk missing
`python -m unittest discover -s tests`	0	103 run, OK. The first clean-state run errored; see Fixes
`python scripts/scan_secrets.py .`	1	28 findings, **all** inside the untracked, git-ignored `quickbooks-online-mcp-server/` clone (Intuit's code and tests; its `.env` is listed by name only, never opened). 0 outside it
`git ls-files -z | xargs -0 python scripts/scan_secrets.py`	0	145 text files scanned, 0 findings. Before today's fix the same command scanned **0** files; see Fixes
`python 01_connection/load_workbook_to_sandbox.py --dry-run`	0	18-entry plan, nothing created
Workbook SHA-256 before / after	—	`75da8d679a89551f…` both times

Live sandbox checks (read-only): see `01_connection/evidence/quickbooks/2026-10-14/README.md`. (a) CompanyInfo PASS. (b) P&L Jan–Jun 2026 monthly and Balance Sheet at 30 Jun 2026 PASS; the BS balances at 5,488.75. (c) 71 tools registered, none of them create/update/delete, PASS. (d) A missing server folder gives an actionable message with exit 1, PASS.

Fixes made in Phase 1

Found by	Defect	Fix	Test
Clean-state test run	`tests/test_ui_numbers.py` crashed with `FileNotFoundError` when `outputs/commentary_grade.json` did not exist yet (test-order dependency)	Missing global eval files are left out of the allowed-token set. That can only make the test stricter	Re-run without the file: 15 UI tests OK
Clean-state regeneration	Committed `outputs/abc/review_packet_2026-06.json` was stale: it lacked `gross_margin_flags` from the G18 change	Regenerated by `run_pipeline.py`	Golden G18, unit tests
Tracked-file secret scan	`scan_secrets.py` treated every argument as a folder: given files it scanned 0 and reported "0 findings". A misspelt path also passed	Files are scanned directly; a missing path exits with an error	`test_file_paths_are_scanned_and_missing_paths_fail`
Step 3d	`qbo_test_connection.py --test` exited 0 when the test failed, and the review UI (`actions._run`) gates on the exit code	Exits 1 on a failed test	Live run: exit 1 for a missing server, exit 0 when connected
Step 3d	No way to point the test at another server folder; the missing-server message named a fixed folder	`QBO_MCP_SERVER_DIR` override; the message names the folder it looked in	Live run above

Independent falsification check

A subagent that had not seen this work got only the brief and the repo, and tried to falsify 5 claims in `README.md` and `brief_traceability.md`. All 5 held: - unit 103 OK, golden 18/18; - the golden cases by source; - golden expected values for G01, G02, G03, G06 and G09, recomputed from workbook cells; - 13 mutants; - `xyz` runs on config only.

It found two more problems: - **"The note is 38 lines" was misleading.** The note is 614 words, with long lines. Reworded in `brief_traceability.md`. - **A unit test wrote into the tracked `outputs/`.** `test_qbo_load` ran `--apply` without an env file, and the loader wrote `outputs/abc/qbo_load_plan.json` before it stopped. Fixed: the loader now stops before any side effect, and the test runs against a temporary output root and asserts nothing was written. The test fails without the fix and passes with it.

Not checked by anyone: G10–G18 cell by cell, and whether `architecture.md` fits on one printed page.

"Doc review only" means the line is met by a document's content; no command can prove it.

Robustness report: fault injection

Source: 03_evals/robustness/ROBUSTNESS_REPORT.md; last changed 2026-10-14.

Generated by `python 03_evals/robustness/fault_injection.py` (do not edit by hand). Each fault is applied to a COPY of the ABC workbook in a temp folder, and both entry points that produce numbers run on that copy: `scripts/run_pipeline.py` (with `--clients-root/--outputs-root` pointing at the temp folder) and `monthly_review.prepare`, step 1 of the `/monthly-analysis` skill. A fault passes only if both paths behave as required.

Source workbook SHA-256 before `75da8d679a89551f…`, after `75da8d679a89551f…` (unchanged).

Required behaviour, fixed before running: **STOP** = intake refuses with a message naming the cell, sheet or cause, and no review packet is written; **WARN** = run continues and the warning is in the review packet (Open Questions in the sign-off pack) and in the analysis workbook's Data Quality sheet; **HANDLE** = run continues, no new warning, every review-packet number and every account amount in the analysis workbook (`Account Values` sheet) equals the baseline. **SILENT-WRONG** (success, different numbers, no warning) must never occur.

Result: 32/32 pass; SILENT-WRONG: 0.

ID	Family	Fault	Required	Pipeline	Skill path	Pass	Message shown (pipeline)
F01	Structure	Missing month column: prior month (May 2026) deleted	STOP	STOP	STOP	Pass	ValueError: Intake refused the workbook: Income Statement: no column for 2026-05 (the prior month of 2026-06) in header row 5; months found: 2025-01 to 2026-06.
